

BENOCS is a pioneer of CDN/ISP collaboration enabling advanced telemetry and analytics solutions for network owners and operators. **BENOCS** solutions allow network operators to boost network infrastructure efficiency levels as well as monitor and understand traffic flows from within the backbone and on the edge.

For our Berlin/Germany office, we are looking for a:

Front End Developer

As a front-end developer at **BENOCS**, you will play a vital role in developing our Analytics tool. Your job is a combination of development, prototyping and deployments to a large user-base. You will develop interactive web applications that provide customers with a better understanding of their networks. You will have the freedom to explore technology options and contribute to design as well as architectural decisions – while receiving meaningful support from the team of experts at every step. Our development team values direct communication, promotes interaction, and uses agile methods to continuously improve our solutions.

The skill-set we are looking for:

- Experience with frameworks like React/Redux/mobx/D3
- Experience in designing, developing and debugging web technologies, including HTML5, SASS/CSS, JS
- Expertise in implementing responsive web design patterns and guaranteeing cross browser, cross-platform and cross-device compatibility
- Understand and practice test-driven development
- A solid background in algorithms, data structures as well as run-time and resource complexity
- Passion about creating easy-to-understand visualizations out of complex data sets

- Motivation and the ability to work independently
- Experience with docker, git, github flow and agile software development

Nice-to-have knowledge

- Experience in User Experience Design
- Experience with Python and Django
- Knowledge of internet topology and mechanisms behind internet transport
- Good idea of network traffic behavior and possibilities of its visualization
- Experience with statistical processing and data visualization using tools such as R or Jupyter
- A basic conceptual and theoretical understanding of statistical data processing
- Experience writing efficient SQL queries

Our Offer

We are a B2B company that offers you an exciting opportunity to work with large and very complex systems pertaining to the network on a global scale. Our work environment is characterized by individual responsibility and a goal oriented team spirit. We highly encourage transparency and a common understanding of working tasks within and among our teams, as we strongly believe that this is the main ingredient to effectively work together – and have fun.

We offer you:

- Flexible working hours
- Small teams with experienced experts
- Flat hierarchical structure
- The opportunities for further trainings and to attend related workshops and conferences

Your application should include a CV, a cover letter, and any relevant reports and/or work references you may have.
